

Integrating innovative **TECH**nologies along the value Chain
to improve small ruminant welf**ARE** management

Innovations – what do farmers think?

Victor Miguel (Oviaragón)

Oviaragón

TechCare final conference
University Foundation - Room Felicien Cattier
Brussels
17-18 June 2025

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 862050

In the TechCare project, the partners participating in the large-scale trials chose several technological devices to measure parameters related to well-being indicators and create predictive alarms of unwanted events.

1.-Weather Station & Indoor Sensors

2.-Individual milk meter

3.-Electronic reader for EID (bolus or e-ear tag) and antennas

4.-Milk Tank Weighing Scale

5.-Automatic weighing scale with electronic ear tag or ruminal bolus

6.-Electronic ear tag identification (r. bolus or e-ear tag)

Through a survey, trial participants have expressed their views on the phases in which they have worked:

1.-Design or collaboration on the trials

2.-Installation of devices

3.- Use of devices

4.-Maintenance of devices

5.-Data collection

6.-Animal welfare assessment

The survey consists of 26 questions, which try to collect:

The degree of ease or complexity found in the different stages.

As well as to quantify the time spent on some of them.

Assess the perceived usefulness of installed technologies in the medium and short term.

They have been made on paper
or online via a FORMS link

and translated into
5 languages

Global information

Technologies installed

Technologies difficulties

1: a little- 5: a lot

Difficulties encountered and how to solve it: WS + indoor sensors

						Best solution
		++				Recharge dust sensor's batteries every month
			+	++	+	<ul style="list-style-type: none"> - Avoid metallic surroundings - Distance btw tablet-sensors: 50-100m - SD card in farms without WiFi
 breakages				++	+	Extra protection: <ul style="list-style-type: none"> - Soil sensors: plastic bottle + concrete brick - Tablet: plastic box
 losses				++		Identify sensor's location with a special mark / flag /...

Difficulties encountered and how to solve it: Individual milk meters

	Main problems	Best solution
	Different frequency of E-ear tags Ewe's head movements	LF E-ear tags/bolus
	Differences btw databases - milk meters	

Difficulties encountered and how to solve it: Milk tank weighing scale

	Main problems	Best solution
	WiFi signal	Install/ amplify WiFi
STABILITY	Weight deviations when the tank is empty/full	Recalibration

Difficulties encountered and how to solve it: Automatic weighing scale

	Main problems	Best solution
	Instructions poorly understandable	Technician support
	Entrance of two ewes at the same time	Adaptation of a previous door

Difficulties encountered and how to solve it: EID Antenna – E- Tags/ bolus

	Main problems	Best solution
	Metal surroundings	Recalibration
	Farms where entrance of animals = exit	Arch reader
	Different frequency of E-ear tags	LF E-ear tags/bolus

Data collection

1: a little- 5: a lot

Animal Welfare Assessment

1: very poor- 5: excellent

FREQUENCY: 12.9 days

EASE:.....

TIME USED: 2.7h.....

Is the information from these tools useful for animal welfare management?

Thank you for your attention
